General Questions

Practice Questions

Q1. Which factor is NOT considered in traffic volume studies?

- A. Time of day
- B. Weather conditions
- C. Road surface type
- D. Vehicle classification

Solution: While time of day, weather conditions, and vehicle classification are important, road surface type is not typically a direct factor in traffic volume studies.

Q2. Which type of intersection is designed to minimize conflict points?

- A. T-intersection
- B. Signalized intersection
- C. Roundabout
- D. Four-way stop

Solution: Roundabouts are designed to minimize conflict points, thereby enhancing safety and improving traffic flow.
