## **General Questions**

Practice Questions

---

**Q1. Which of the following operations is performed to maintain the balance of an AVL tree after insertion?**

- A. Rotation
- B. Traversal
- C. Rearrangement
- D. Deletion

*Solution: After an insertion in an AVL tree, rotations (single or double) are performed to maintain the balance property.*

**Q2. Which of the following applications is best suited for AVL trees?**

- A. Database indexing.
- B. Memory management.
- C. Real-time applications.
- D. Static data storage.

*Solution: AVL trees are well-suited for database indexing where frequent searches are required due to their balanced nature.*
